Remote Monitoring

Low-cost Asset Tracking technology can give you the information you need to plan your next move.

Features

- Supervisory position reporting.
- Interval override.
- 4 programmable alarm inputs.
- Integrated motion sensor.
- Geo-fencing.
- Field replaceable battery pack.
- Field programmable using laptop or PDA.

Choices

- Internal battery or line-power.
- Integrated or remote antenna.
- Single or dual tethered temperature sensors.
- TTL serial configuration & sensor port.

Accessories

- Door contact switch cables.
- Adhesive installation kit.
- PDA tool.
- Custom cable assemblies.

X-Tracker

Know quicker, plan better, grow bigger.

X-Tracker asset tracking device is a ready-to-go, self-contained telemetry unit capable of delivering long-term service life through the use of an advanced low-power GPS engine coupled to a simplex satellite transmitter.

Asset Tracking

X-Tracker is well suited for use with containers or trailers. The unit transmits periodic and/or event driven position information. X-Tracker generates messages using a simplex modem which communicates with a Simplex Data Service network.

Power Source

To accommodate the compact, low-profile design, X-Tracker comes with a custom battery pack of eight AA-cells plus a hermetically sealed hybrid layer capacitor (HLC). Use of the battery pack enables the unit to deliver six location reports a day for two years and can easily be replaced in the field.

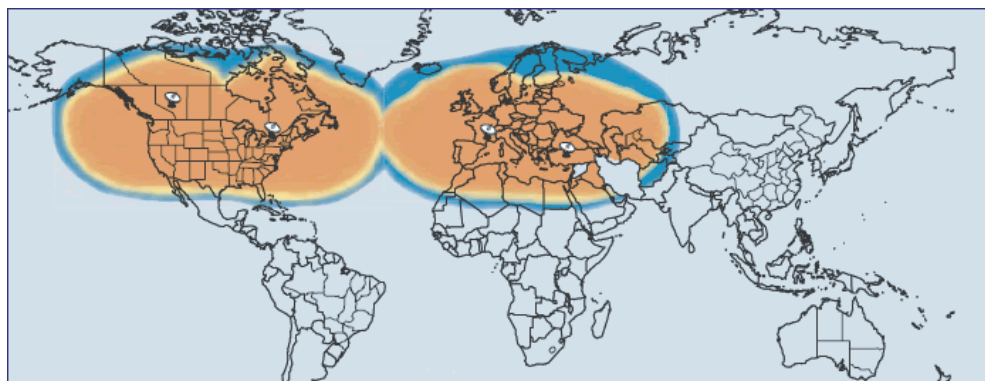

Remote Location Monitoring

Two services are available for you to monitor your assets. The first uses in-office software that can give you up-to-the-minute position reporting at the touch of a button. Integrated map technology allows you to visually track your asset on-screen as it travels to it's final destination. The second lets us do the work for you. When your asset moves from it's last location, our monitoring office is notified at which time we notify you of the change in location.

Security and Recovery

For those concerned with equipment security or recovery in the event of theft, we offer a live monitoring service. By using motion-detection technology, X-Tracker alerts our offices if your equipment has moved from where you left it. Once we are alerted of this movement, we can quickly locate your equipment and report it's exact location to the proper authorities.
